#### Abstract

This technical report is an addendum to a study we initially reported on in 2014 (Wray, Lai, Saez, Alonzo, \& Tindal, 2014). In response to a request for additional analyses, in particular reporting confidence intervals around the results, we re-analyzed the data from the Wray et al study. This supplementary report presents the results of the additional analyses. Results varied by measure and grade but were generally within good or acceptable ranges for all measures and grade levels analyzed.

## Supplementary Report on easyCBM Grade K - 2 Literacy Measures: <br> Classification Accuracy and Predictive Validity, a Follow-Up to Technical Report 1403

We initially conducted a year-long study of the easyCBM (Alonzo, Tindal, Ulmer, \& Glasgow) early reading measures in school year 2012-2013, reporting the results in Wray, Lai, Saez, Alonzo, and Tindal (2014). In response to a request for additional analyses, in particular reporting confidence intervals around the results, we re-analyzed the data from the Wray et al study. This supplementary report presents the results of the additional analyses.

## Methods

As reported in Wray et al. (2014), the sample included 222 kindergarten and 204 firstgrade students from a convenience sample of three (K-5) schools within the same semi-rural Pacific Northwest school district. Students came from six kindergarten and eight first-grade classrooms. All students in attendance on the days that the research team collected data were included in the study. Of the kindergarten sample, $83.3 \%$ were White, $9.5 \%$ were reported as two or more races, $2.3 \%$ were Black $2.3 \%$ were American Indian/Alaskan Native, and two were Asian; $20.3 \%$ were identified as Hispanic, and $48.6 \%$ as female. For grade 1 students, $83.8 \%$ were White, $6.4 \%$ were American Indian/Alaskan Native, $4.4 \%$ were reported as two or more races, $3.4 \%$ were Black, and one student each was of Asian and Pacific Islander descent. Of the grade 1 students in our sample, $23.5 \%$ were Hispanic, and $44.1 \%$ were female. We used data from the easyCBM® measures administered in the fall of 2012 and the SAT-10 meausres administered in the spring of 2013 for this supplementary report.

## Measures

We administered alternate forms of four easyCBM® measures (Letter Names (LN), Letter Sounds (LS), Phoneme Segmenting (PS), and Word Reading Fluency (WRF)) to all
kindergarten and first-grade students in the sample. Each of these measures is administered for 60 seconds, one-on-one by a trained assessor. We also administered two sub-tests from the SAT-10 to students in each grade. Kindergarten students were administered the Sounds and Letters measure (SL) and the Word Reading measure (WR) from the SESAT 2 (spring seasonal measure). First grade students took the Word Reading measure and the Word Study Skills measure (WWS) found in the spring SAT-10. Second-grade students took the Word Reading measure and the Vocabulary measure found in the spring SAT-10. The SAT-10 Sounds and Letters measure is administered orally. An assessor reads direction while the students follow along in a workbook. This subtest assesses matching words that begin or end with the same sound, recognizing letters, and matching letters to sounds. Like the sounds and letters measure, the SAT-10 word reading measure was administered orally. Similarly, directions were read orally while students followed along in a workbook. This subtest requires students to identify a printed word that matches either a work presented orally or an illustration. More information about test administration can be found in the original technical report describing this study (Wray et al, 2014).

The SAT-10 is a nationally recognized standardized assessment published by Pearson. The Reading section of the SAT-10 has a reported reliability rating of .87 , the Math section $.80-$ .87, and the language section .78-. 84 (Stanford Achievement Test 10 (SAT-10)). We selected the SAT-10 as the external criterion measure for this study due to its technical adequacy and relevant constructs assessed.

## Results

We present complete results for all analyses conducted in table format at the end of this supplementary report. They are summarized in text here as well.

## Classification Accuracy Results

Table 1 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 10 different forms of the kindergarten easyCBM® Letter Names Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as at risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $69-.85$ across all 10 forms of the LN measures, with an average AUC of .77 .

Table 2 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 10 different forms of the kindergarten easyCBM® Letter Sounds Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as $a t$ risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $71-.78$ across all 10 forms of the LS measures, with an average AUC of .76 .

Table 3 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 10 different forms of the kindergarten easyCBM® Phoneme Segmenting Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as $a t$
risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $62-.71$ across all 10 forms of the Phoneme Segmenting measures, with an average AUC of . 66 .

Table 4 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 9 different forms of the kindergarten easyCBM® Phoneme Segmenting Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Word Reading sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as at risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $60-.72$ across all 10 forms of the Phoneme Segmenting measures, with an average AUC of . 66 .

Table 5 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 10 different forms of the kindergarten easyCBM® Word Reading Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as $a t$ risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $71-.78$ across all 10 forms of the WRF measures, with an average AUC of .76.

Table 6 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 5 different forms of the Grade 1 easyCBM® Phoneme Segmenting Fluency
measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters and Word Reading subtests. We used the SAT-10 Sounds and Letters and Word Reading sub-tests as the criterion measures, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as at risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $57-.70$ across all 5 forms of the Phoneme Segmenting measure using the SAT-10 Sounds and Letters sub-test as the criterion, with an average AUC of .61, and from . 47-. 63 across all 5 forms of the Phoneme Segmenting measure using the SAT-10 Word Reading sub-test at the criterion, with an average AUC of . 55 .

Table 7 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 2 different forms of the Grade 1 easyCBM® Word Reading Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Sounds and Letters sub-test. We used the SAT-10 Sounds and Letters sub-test as the criterion, selecting $50^{\text {th }}$ percentile performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as at risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . 60 - . 77 across the 2 forms of the WRF measures, with an average AUC of .68 .

Table 8 presents the results of classification accuracy analyses using data gathered in the fall of 2012 for 5 different forms of the Grade 2 easyCBM® Passage Reading Fluency measure and the spring of 2013 for the Stanford Early School Achievement Test/Stanford Achievement Test, 10th edition (SESAT/SAT-10) Vocabulary sub-test. We used the SAT-10 Vocabulary subtest as the criterion, selecting $40^{\text {th }}$ percentile performance as the cut point. $50^{\text {th }}$ percentile
performance as the cut point for SAT-10 and $25^{\text {th }}$ percentile on the easyCBM measures to identify students as at risk. These cut points were selected to correspond with students needing intensive intervention. AUC ranged from . $83-.86$ across the 5 forms of the PRF measures, with an average AUC of .85 .

## Predictive Validity Results

We used Pearson's correlations to analyze the relation between the easyCBM literacy and SAT-10 literacy measures.

Table 9 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 10 alternate forms of the Kindergarten easyCBM ${ }^{\circledR}$ Letter Names Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 73 .79 , with an average correlation of .77 .

Table 10 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 10 alternate forms of the Kindergarten easyCBM ${ }^{\circledR}$ Letter Sounds Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 71 .78 , with an average correlation of .76 .

Table 11 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 6 alternate forms of the Kindergarten easyCBM® Phoneme Segmenting measure and the SAT-10 Sounds and Letters and Word Reading sub-tests. Correlations ranged from . 62-.71, with an average correlation of . 66 for the Sounds and Letters sub-test and from . $60-.72$, with an average correlation of .66 for the Word Reading sub-test.

Table 12 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 10 alternate forms of the Kindergarten easyCBM® Word Reading

Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 71 .78 , with an average correlation of .76 .

Table 13 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 10 alternate forms of the Grade 1 easyCBM® Letter Names Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 47 .73 , with an average correlation of .59 .

Table 14 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 5 alternate forms of the first grade easyCBM® Letter Sounds Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 40 .77 , with an average correlation of .61 .

Table 15 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 5 alternate forms of the first grade easyCBM® Phoneme Segmenting Fluency measure and the SAT-10 Sounds and Letters and Word Reading sub-tests. Correlations ranged from . 57 - . 70, with an average correlation of .61 for the Sounds and Letters sub-test and from .47-.59, with an average correlation of .52 for the Word Reading sub-test.

Table 16 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 5 alternate forms of the first grade easyCBM® Word Reading Fluency measure and the SAT-10 Sounds and Letters sub-test. Correlations ranged from . 40 .77 , with an average correlation of .61 .

Table 17 presents the Correlation coefficient as well as the $95^{\text {th }}$ Confidence Interval (both lower and upper bounds) for 5 alternate forms of the second grade easyCBM® Word Reading Fluency measure and the SAT-10 Vocabulary sub-test. Correlations ranged from .85-.99, with an average correlation of .93 .

## Discussion

Results varied by measure and grade but were generally within good or acceptable ranges for all measures and grade levels analyzed.
