

## **Product Name:** ZipTrain

### **Product Description**

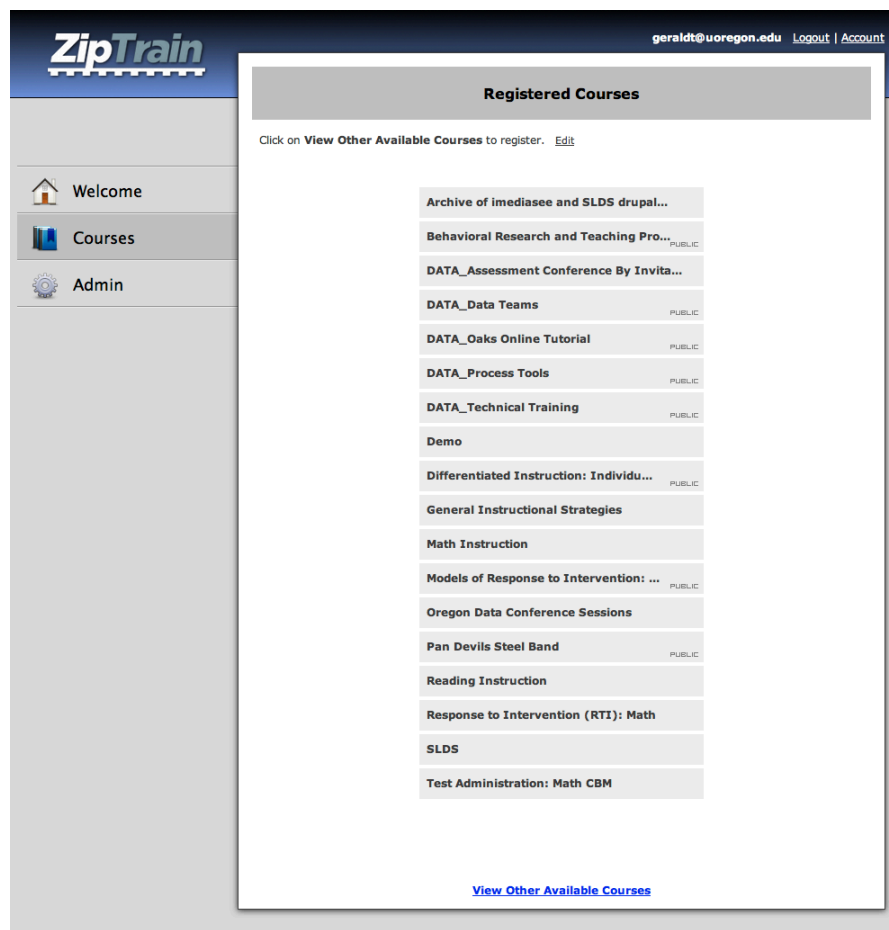

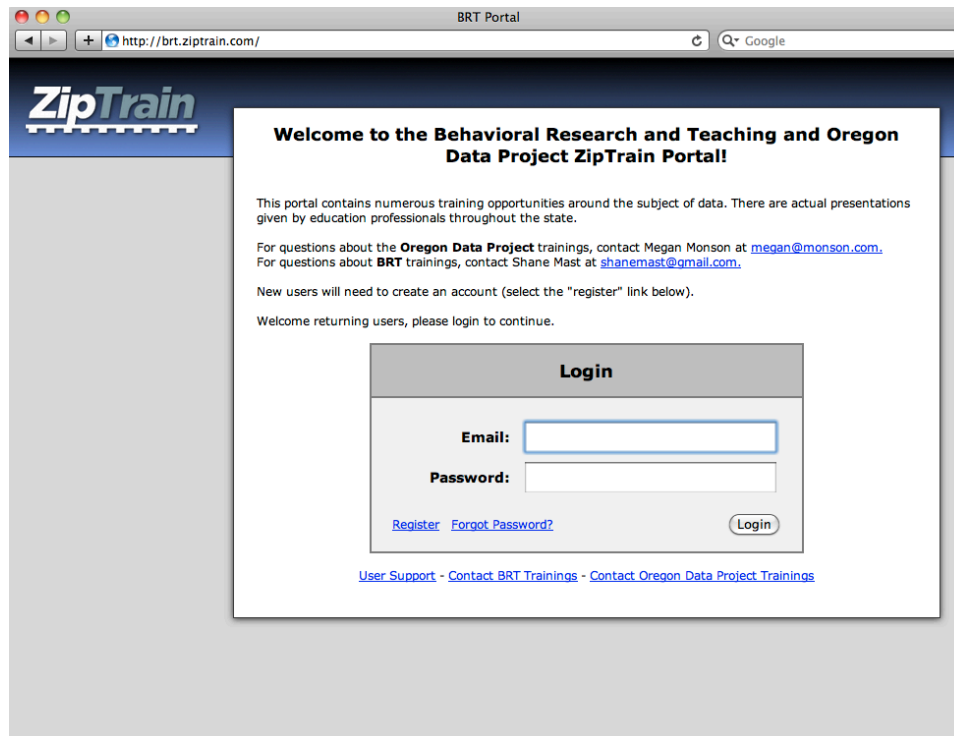

ZipTrain is an online training and proficiency administration system designed to put complete control of content and course design in the hands of the course creation team. Professional and secure deployment is assured because the ZipTrain software automatically and transparently provides the technology backbone and support. The basic ZipTrain unit is an instance; each ZipTrain instance supports a unique user database, a set of user configurable public facing web pages (for example about this site and contact information), user defined proficiency tests and training modules, and a localized set of files.

### **List of Essential Features**

- *Portal:* access to the ZipTrain system is accessed through the portal located at <http://empl.ziptrain.com/> or <http://brt.ziptrain.com>.
- *User Login / Access Levels*
- *New User Creation*
- *Automated Course Registration*
- *Instance Development Status*
- *Instance Creation and Administration:* primary instance id • name of instance • Instance Administrator(s) • instance CRN • instance primary instructor • instance course credit(s) • instance EMPL type • instance EMPL application
- *Reporting*

### **Audience**

Ziptrain can be used for internal professional development within an organization, for general professional development within and across school districts, and for credit bearing courses within institutions of higher education.

## Welcome to DATA\_Data Teams

Welcome to Direct Access to Achievement's Data Teams course. The course consists of videos and supplementary materials that support the implementation of data teams. It is divided into eight lessons that correspond to steps in the data team process. The materials were created by Northwest Regional Education Service District, in partnership with its districts and their teachers. The Oregon Direct Access to Achievement (DATA) Project, an initiative of the Oregon Department of Education, provided financial support. For more information on the project, visit <http://www.oregondataport.org>.

## Training

Each of the lessons below contains videos and materials that support the implementation of data teams. Each lesson begins with a video, which provides an explanation of the steps in the data team process and shows a data team in a meeting illustrating that step. Students are asked to view the video, and then follow the directions on accessing and completing the rest of the materials for that lesson.

**Training > Step 1: Charting Data**

This lesson explains how teams can chart data to determine what students know and are able to do. Collecting and graphing data allows teachers to determine which instructional strategies and interventions will be effective.

Training Section: Participation - Accommodation Station Overview Collapse

Assessment Decision Support System

To participate effectively in large-scale testing programs, students first need to take the right type of test and then have the test administered in a manner that reflects their level of achievement. This goal of large-scale testing programs is represented at the bottom of the flow chart. However, to achieve this outcome, teachers need to systematically collect information and use it for making recommendations of participation and accommodation as part of the Assessment Decision Support System. This information can come from three sources:

1. Student Characteristics: Personal and 'personological' traits of each student (what they have been born with) and experiential and environmental events (what they have been exposed to and learned).
2. Teachers' Perceptions: Both direct teacher interactions with students and their skill/knowledge acquired from professional development.
3. State Policies and Practices: Certain state adopted tests and the regulations and policies adopted for implementing the test.

The training in this module provides specific information on accommodations that can be used with any type of large-scale assessment (as part of the general education test or as part of the alternate assessment, with the modified or alternate achievement **Standards**). The accommodations are organized into six major types of change: (a) assistive devices, (b) presentation (of which there are five), (c) responses, (d) setting, and (e) time/schedule.

Instance: DATA\_Technical Training  
Training Section: Component 2 Activity 2: Data, Data, Data. Who's Got Your Data? Collapse

Oregon DATA Project Technical Training

**Component 2: Building a Culture of Data Quality**  
**Activity 2: Data, Data, Data. Who's Got Your Data?**

This lesson prepares district leaders to conduct Component 2 Activity 2 of the Oregon DATA Project's Technical Training. Please read the lesson plan and follow the instructions below. When you are ready to conduct the training, the resources you need can be downloaded by clicking on the "Materials" link at left.

**Purpose**

- In a Culture of Data Quality, people believe that good data is an integral part of the educational enterprise. They understand the important role data plays within the organization and how data is used to make educational decisions or to meet accountability demands. Establishing this understanding within the Data Quality Oversight Committee (DQOC) is a first step in establishing it districtwide.
- This is the first activity for the DQOC and will provide a broad overview of what the DQOC will be doing. This activity will also identify the large amount of data that exists within the organization and how the data are used to make important decisions or impact accountability requirements (AYP, state report card, etc.).

**Participants**

- Presenter: Leader of the DQOC
- Audience: Data Quality Oversight Committee

**Session Description**

- The first meeting of the DQOC needs to bring everyone up to speed as to why the district is undertaking this work and the role that the DQOC will play. The Quality Data Culture Concept Map will act as roadmap of the activities of the DQOC.
- The DQOC will be fulfilling the role of a Data Steward (bottom left area of map).
- The first activity will be to discuss the importance of quality data (bottom right).
- Then the components of and factors that affect quality data (upper left and right).
- A special PowerPoint presentation, "Who's Got Whoville's Data?" was created to capture the essence of a Culture of Data Quality in non-technical terms. This humorous presentation is used to generate discussion and interaction of the DQOC.
- Total time for this session: 60-65 minutes.

**Objectives**

- Set an overview of the activities and purpose for the DQOC.
- Identify the wide array of data used to meet accountability and school improvement efforts.
- Identify the wide array of data storage locations used within the district.
- Identify important decisions, from instructional to accountability, made using district data.

**Presenter Preparation**

- Review the presenter notes for both PowerPoint presentations.
- Make a decision as to how to bring the DQOC to the same level of understanding of "The Need for Data Quality" presentation.
- You may choose to take 10 minutes to present the PowerPoint up through slide 12 (do not go into the details of the responsibilities of a Data Steward). Then indicate that the "purposeful assignment of data responsibility and oversight" will not be handled by a Data Steward but instead, the Data Quality Oversight Committee.
- You may choose to summarize the PowerPoint presentation shared with district leadership and discuss the need for data quality and then move to the sharing of the Quality Data Culture Concept Map.
- Make some decisions about the meeting room.
- You will be projecting a PowerPoint presentation.
- You will be creating four or five chart-pack sheets that will need to be displayed.
- You will want everyone in the room to participate – think of an open U shape so participants can make eye contact with other members of the committee.
