Introduction

The *easyCBM*® norms are updated every five years to ensure educators have up-to-date data for identifying students at risk for academic difficulties, setting growth targets, and evaluating progress over time.

Data from the 2024–2025 academic year were drawn from valid *easyCBM* school district accounts, with strict inclusion criteria applied to ensure score validity and consistency. A data selection process prioritized districts with comprehensive testing coverage, followed by stratified sampling to ensure geographic representation across four U.S. regions.

The new norms reflect actual student performance on the *easyCBM* measures. In some cases, the percentile rank associated with a particular raw score increased; in other cases, it decreased. Such changes are to be expected when norms are updated and are a normal part of the norming process.

The following charts compare the 2020 norms to the 2025 norms. Color coding has been added to cells in the 2025 columns to highlight where changes between the 2020 and the 2025 norms occur.

Cells that are shaded green indicate that the number of items required to get the same percentile rank dropped. Cells that are shaded yellow indicate the number of items required to get the same percentile rank increased. Unshaded cells indicate that there is no change between the 2020 and 2025 norms.

By including shading with these charts, we hope to provide you with a quick way of identifying where the norms shift.
